

# Welcome to CSE 437 Pattern Recognition

S M RAFI UDDIN RI FAT

# Pattern Recognition

The field of pattern recognition is concerned with the automatic discovery of regularities in data through the use of computer algorithms and with the use of these regularities to take actions such as classifying the data into different categories.

# Supervised Learning

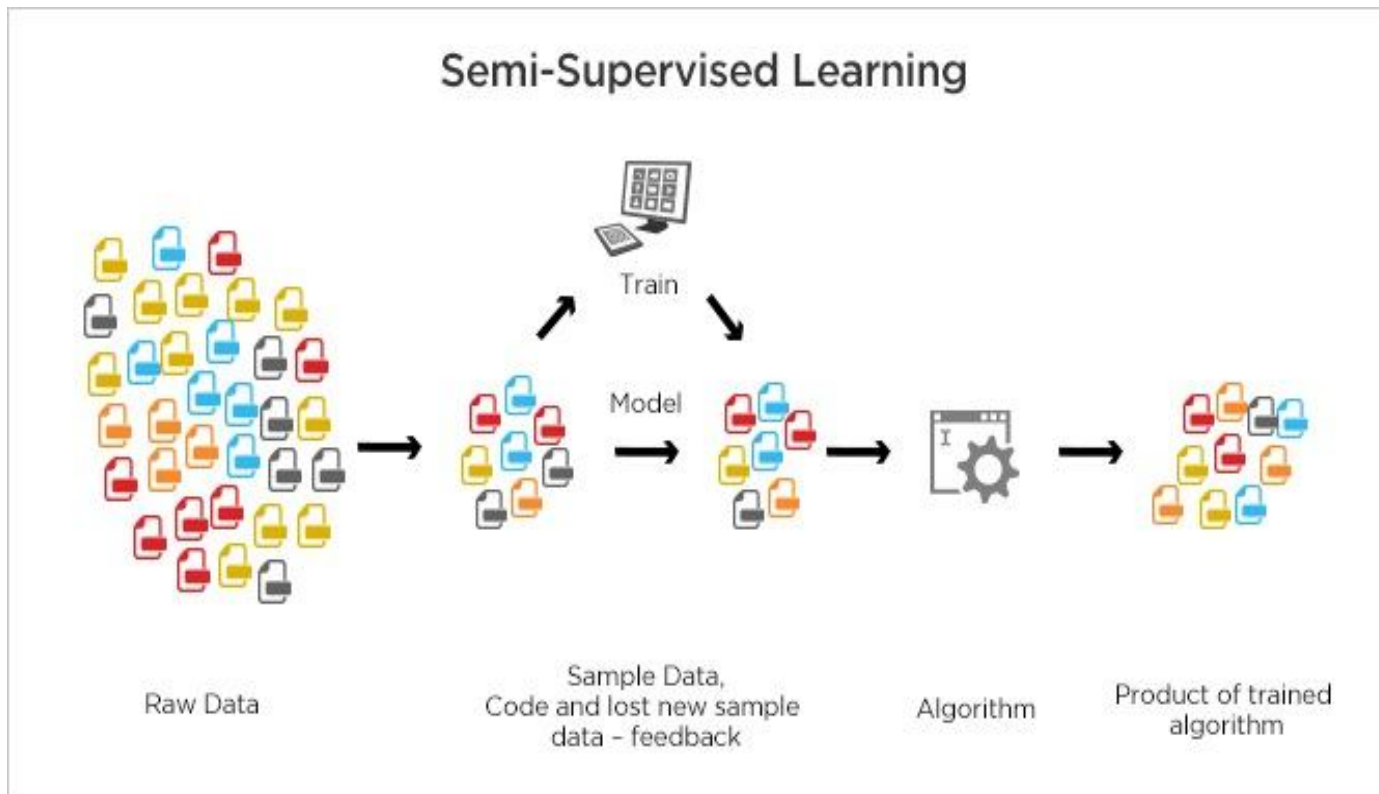

Training set:  $\{(x^{(1)}, y^{(1)}), (x^{(2)}, y^{(2)}), (x^{(3)}, y^{(3)}), \dots, (x^{(m)}, y^{(m)})\}$

# Unsupervised Learning

\*No labeled data

# Semi-supervised Learning

# Reinforcement Learning

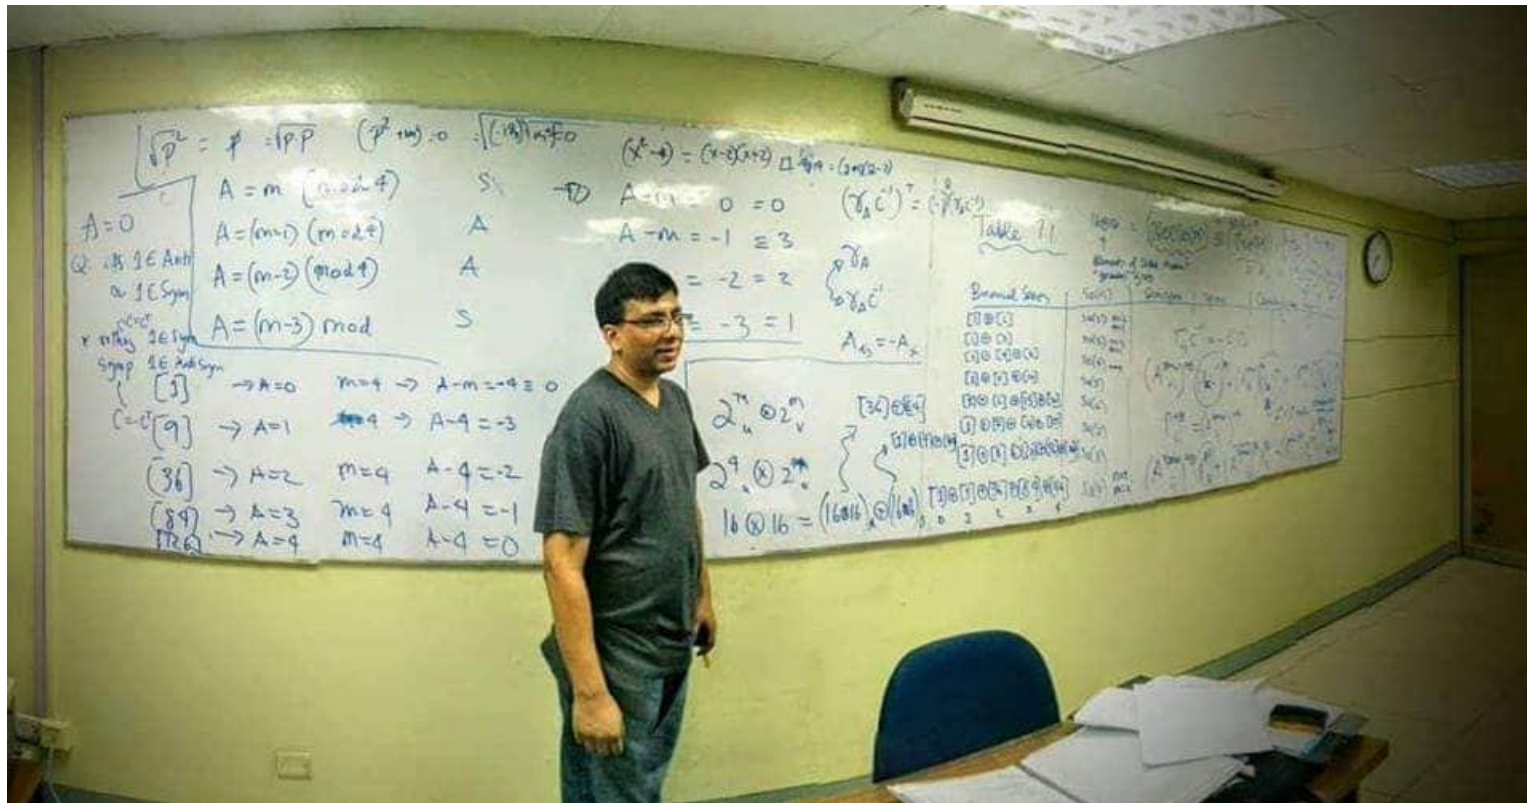

# 4 Litter Bucket Problem

Just for fun!

Problem:

You have unlimited supply of water. You need to obtain exactly four litter of water (not more or less). But you have two container. One is 3 litter bucket and another is 5 litter bucket. How could you obtain exactly 4 litters of water using only these two buckets?

# Definition of Machine Learning

A computer program is said to learn from experience  $E$  with respect to some class of tasks  $T$  and performance measure  $P$ , if its performance at tasks in  $T$ , as measured by  $P$ , improves with experience  $E$ .

# Example

Suppose your email program watches which emails you do or do not mark as spam, and based on that learns how to better filter spam. What is the task  $T$  in this setting?

- ☐ Classifying emails as spam or not spam.
- ☐ Watching you label emails as spam or not spam.
- ☐ The number (or fraction) of emails correctly classified as spam/not spam.
- ☐ None of the above—this is not a machine learning problem.

# Google Class

- Everyone must join google class.
- All class lectures, notes, announcement, class test marks will given through Google class.
- Assignment submission (may be) collect from Google class submission.

# Do's and Don'ts

## Do's

- Try to attend every class and took the lectures on your notebook.
- Ask questions without any confusion.

## Don'ts

- Never talk with your fellow classmates while I'm giving lectures. Its very annoying.
- Never ask one question – “What will be the questions from this lecture in exams”?

# Evaluation

- Quiz – 15%
- Assignment – 5%
- Attendance – 10%
- Midterm – 20%
- Final – 50%

N. B. : Quiz and Assignment marks may vary on situation.

# Consultation Hour

- Section A

- ✓ Thursday 9:30 AM to 10:50 AM

- Section D

- ✓ Sunday 11:00 AM to 12:20 PM

# Find a Research Topic

- Necessity of Standard Dataset.
- Literature Review.
- Try to learn  $L_A T_E X$  or try to use it at least.
- Your conception must be clear!
- Try to sketch your imagination.
